Source: Human brain

Blood sample from the tissue donor was tested and found negative for HBsAg, HIV-1 and HIV-2 antibodies, HCV, and syphilis.

Analysis: Purity > 90 % (SDS-PAGE). GFAP preparations are represented by several 43-49 kDa protein bands. The major two bands appear in the region of 46 kDa.

Purification: Two-staged tissue extraction, hydroxyapatite chromatography.

Immunological activity: Verified in ELISA using anti-GFAP antibodies.

Presentation: Lyophilized from 16 mM NaHCO₃, pH 8.5

Product is recommended to reconstitute with distilled water.

Storage: -20 °C (-15 … -30 °C allowed)

Material safety note: This product is sold for research use only. Standard Laboratory Practices should be followed when handling this material.
